Bristol, CT - ETTER Engineering is proud to announce a strategic partnership with Lifecycle Renewables, a renewable fuel company with a bio-refinery located in Charlestown, MA. ETTER will be the distributor and field service agent for LR100, which is a renewable fuel made from waste cooking oil and fats.

"This gives us an alternative when we have an existing client or future client that wants to convert from #2, #4 or #6 heating oil and we can't convert them to natural gas", stated Tom Etter, President. "The renewable fuel products are carbon neutral and will save our customers considerable money on their fuel expenditures, it may require little or no capital investment and reduces their impact on the environment", said Etter.

Jon Moore, Vice President of ETTER stated, "We will provide field engineering, service and sales for Lifecycle Renewables. After a very careful review of their business and working together on a beta project, we saw a significant opportunity to help heavy oil burning companies switch to a cheaper fuel alternative without a significant capital investment."

About ETTER Engineering. Located in Bristol, Connecticut, ETTER is a third generation family owned business that offers process heating and combustion products and solutions for the commercial and industrial industries. To learn more about ETTER, visit www.etterengineering.com
